

**AD Policy Working Group**  
**December 14th, 2012**  
**3110 Engineering Building II**  
**3pm-4:30pm**

Meeting was cancelled. A number of items were addressed via email, details below.

---

**Business handled outside of meetings:**

- Lots of people have complained about RDP sessions getting dropped when GPO updates. The following fixes that. I'd like to suggest that we set this at the domain level:
  - Hive HKEY\_LOCAL\_MACHINE
  - Key path SYSTEM\CurrentControlSet\Control\Terminal Server
  - Value name fDenyTSConnections
  - Value type REG\_DWORD
  - Value data 0x0 (0)
- Request by Tom Farwig to add the service account "oit.print.service" to the "NCSU-Read Group Memberships" group. This account is used to get users and groups out of AD for PaperCut through the load balanced LDAPS virtual IP. **Approved by Committee 11/9/12.**
- Request by Katina Blue of of Business Continuity and Disaster Recovery to add "<https://ldrpsprod.oit.ncsu.edu/CMS/>" to the IE Trusted sites domain level policy (WolfTech Default Domain Policy - Desktop OS). LDRPS is the campus Disaster Recovery Planning system. **Approved by Committee 11/15/12.**
- XP GPO change for scripts to run asynchronously: We've found that the way that startup scripts run in XP is causing the SCCM client installer to fail consistently. Ryan was working with Julie and determined that setting this GPO setting alleviates the issue: Computer Configuration --> Policies --> Administrative Templates --> System --> Scripts --> Run startup scripts asynchronously.

Technical committee is for setting it (though a couple people are MIA), and XP is the last client OS to run things synchronously by default. So we'd be changing XP to work like new OS's. Grand total change for most XP machines should be that they boot a little bit faster. And the SCCM client install works more often.

Any concerns? If people are ok with it, I'd like to announce and make the change prior to patch deployments this Thursday so we can catch the next set of reboots. **Approved by Committee 12/12/12.**
